

VERTICAL HYDRANT BEND

This bend has solved the problem of attaching a sprinkler to the hydrant, in completely fixed installations, in a brilliant and rational way. It is made as the previous bends in the models:

- type A – with bayonet connection;
- type V – with spear connection.

The working is identical to that one of the hydrant bends.

It is built for the following diameters:

Type A	Type V
Ø 60 x 2"	Ø 60 x 2"
Ø 80 x 3"	Ø 80 x 3"
Ø 100 x 4"	Ø 100 x 4"
Ø 120 x 5"	Ø 120 x 5"
